

Torben Haack

Berlin, DE • torben.haack@ipv4.8shield.net • t128n.dev • github.com/t128n

Summary

Technical Product Owner and Software Engineer focused on data systems, platform engineering, and developer tooling. Passionate about open-source technology. Part-time student of Business Informatics at BHT Berlin.

Education

BS **Berliner Hochschule für Technik (BHT)**, BS in Business Informatics (part-time) Oct 2025 – Jan 2031

Voc. **Oberstufenzentrum für Informations- und Medizintechnik Berlin-Neukölln**, Voc. Sept 2022 – Dec 2024

Qual. Qual. in Computer Science / Data and Process Analysis

Experience

Mercedes-Benz AG, Technical Product Owner & Software Engineer Jan 2026 – present

- Technical Product Owner of an OT Cloud Gateway, owning roadmap and stakeholder alignment.
- Software Engineer for internally developed OT Cloud Gateway core services, IIoT data products, and internal engineering tooling.
- IIoT Community Manager, establishing knowledge-sharing structures and engineering standards across teams in a global automotive environment.
- Subject-Matter Trainer, mentoring apprentices in IIoT, data engineering, and software engineering practices.

Mercedes-Benz AG, Software Engineer Jan 2025 – Jan 2026

- Engineered IIoT data products.
- Built automated testing systems for Windows OT image compliance.
- Defined engineering standards, managed internal version control, and built automation tooling.

Mercedes-Benz AG, Apprentice Computer Science Expert for Data and Process Analysis Sept 2022 – Jan 2025

- Built automation tools and data quality dashboards.
- Co-trained incoming apprentices.
- Delivered technical webinars on GitHub and development standards.
- Completed program 6 months ahead of schedule.

Projects

fidup-wiki Nov 2025

- A free, open-source knowledge base for trainees preparing for the final exam of the German vocational qualification in Data and Process Analysis (Fachinformatiker für Daten- und Prozessanalyse). Covers comprehensive learning material and practice exercises across all relevant exam topics.

Packy

- A browser-based tool that resolves the full dependency tree of any npm package and bundles it, along with all transitive dependencies, into a single, self-contained tarball. No backend required; runs entirely in the browser via WebContainers. Built for deploying packages to air-gapped or network-restricted environments where direct registry access isn't available.

Additional Experience and Awards

Top Graduate Computer Science Expert for Data and Process Analysis 2025 (Berlin): IHK Berlin

Technologies

DevOps: CI/CD (GitHub Actions), Docker, Podman, IaC, Linux, Git

Data Engineering: Python, PySpark, SQL, Databricks, MQTT, IIoT

Software Engineering: TypeScript, Node.js, React, Vue.js, Vite, Vitest, CSS

Business: Product Management, Project Management, Community Management

Certificates

GitHub Foundations: GitHub · 2024-12
